

Dear Commissioner Henney:

As a concerned citizen, I urge the Food and Drug Administration to halt any new genetically engineered (GE) foods until the agency requires the labeling and pre-market safety testing of all GE food.

Genetic engineering of food poses the risk of new allergens and toxins being introduced into the food supply and increases the possibility of human resistance to antibiotics. Genetically engineered crops also threaten the Monarch butterfly and soil health. Without long-term safety testing and labeling of GE foods, consumers cannot make informed choices about the food they eat.

I urge you to take immediate action that gives consumers the right to know what is in their food and that ensures a safe and healthy food supply for the public.

Sincerely,

Name: Noah Weinreb

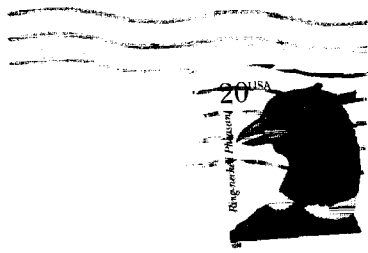

Address: 22 W. 24th St.
N.Y.C. 10010 New York
